Frontiers Meeting 2011

THE COUPLING BETWEEN TECTONICS AND SURFACE PROCESSES

14 November 2011

The Geological Society of London, Burlington House, Piccadilly, London

Frontiers Meetings are 1-day meetings focused on short presentations and discussion to explore developments in emerging geoscience areas, followed by an open access discussion forum.

Convenors

Mark Allen (Durham) · Philip Allen (Imperial) · Niels Hovius (Cambridge)
Chris Jackson (Imperial) · Adrian Hartley (Aberdeen) · Woody Wilson (BP)

*Registration for this meeting is free, but you must pre-register your interest in attending
(Please email Georgina Worrall at the address below)*

Call for papers

Oral presentations are invited on all aspects of the coupling between tectonic and surface processes, but the convenors are particularly interested in contributions from fields that are not conventionally covered at Geological Society research meetings, and/or lie at the interfaces between different fields. Such fields might include atmospheric physics and geotechnical studies, while interfaces include the applications of seismology, seismic imaging, geodesy, glaciology and mantle geophysics to understanding tectonic drivers and the feedbacks on those drivers.

Abstract Submission Deadline: Friday 29 July 2011

Please submit abstracts to Georgina Worrall

For further information about the meeting, or to submit an abstract, please contact: Georgina Worrall
