

Managing risks across the Mining and Oil & Gas lifecycle

10 – 12th July 2017

Imperial College London

The industries of the extractives sector face many risks of a similar nature. This conference brings together operators and service providers from both mining and oil & gas to explore our understanding of these risks and methods by which we can better manage them.

The decision to explore for a resource, and potentially extract it, poses a wide array of opportunities and threats.

- Will there be anything of worth in the ground, and can you prove it?
- Do you have the technical skill to extract, process, or produce it both economically and responsibly?
- Will you be able to gain and retain your licence to operate?
- Will the need for your resource, and price it commands be sustained throughout the life of your asset?
- What will your legacy be when you walk away from site?

The more robustly we can answer these questions and manage their accompanying risks, the more successful our projects will be.

10-11 July

Workshops into key risks faced by both mining and oil & gas.

12 July

Discussion with our operator's CEOs, Heads of Geoscience, and Chief Risk Officers on key risks and their management.

13-14 July

Geological Society Conference: Sharing an Uncertain World: Lessons in Managing Risk
